The book denotes $Rf(P1)$ to be the expression given by Equation 4 but where PF and PM are fixed and are held constant as we change the value of P1. In the case where we do not fix PF and PM we can evaluate $Rb(P1)$ at its two end points of P1. If $P1 = 0$ then from Equation 4 $Rb(0) = C0(1 - PF) + C10PF$.
