Elements of Probability and Statistics: An ...

The probability of drawing an ace from a standard deck of cards is $\frac{4}{52}$. What this really means is that if I draw one card from a deck and see whether or not it is an ace and then replace the card and shuffle well, and repeat this exercise infinitely many times, then over the long haul

In probability theory,

Read Book Elements Of Statistics

an event is a set of outcomes of an experiment (a subset of the sample space) to which a probability is assigned. A single outcome may be an element of many different events, [2] and different events in an experiment are usually not equally likely, since they may include very different groups of outcomes. [3]
