have piercing-sucking mouthparts that probe into plant cells. They feed on plant sap and excrete a sticky substance called honeydew on which black sooty mold may grow. Some species transmit viral diseases.

COMMON GREENHOUSE PESTS - APHIDS

Recognizing the role of natural enemies of pest insects. Pests are those species that attack some resource we human beings want to protect, and do it successfully enough to become either economically important or just a major annoyance. They are only a tiny fraction of the insect species around us.
